EDUCATION -----

Candidate for Bachelor of Mathematics

University of Waterloo

Sept. 2016 - Oct. 2021 (Expected)

- Honours Computational Mathematics
- Minor in Computing and Combinatorics & Optimization

Relevant courses:

- Obj.-Oriented Soft. Dev. (C++, Bash)
- Algo. Design & Data Abstraction (C)
- Functional Programming (Racket)
- Data Types & Structures
- Management Information Systems
- Computers & Computer Systems

OTHER EXPERIENCE -----

Camp Counsellor	Event Coordinator
Camp Bus Captain	Teaching Assistant
Residence Amb.	Student Mentor

INTERESTS -----

UI/UX Design	Bullet Journaling
Badminton	Embroidery
Calligraphy	Painting

EXPERIENCE -----

FULL STACK WEB DEVELOPER, Polar

Remote | Sept. - Dec. 2020

- Developed client-facing features on virtual machine environments and effectively debugged code and tests using **VSCode** and **Chrome DevTools**
- Expanded client functionality in **Django** admin with custom fields and new permissions using **Python** and database migration files
- Improved usability of web product by enhancing UI in **JavaScript**, **CSS**, & **React**
- Upheld code stability standards in **Jenkins** with tests using **Unittest** framework

iOS COMPUTER ENGINEER, Flybits Inc.

Toronto, ON | Jan. - Apr. 2020

- Developed SDK features involving UI changes, HTTP requests, JWTs, & caching using **Swift** in **Xcode** after completing Stanford's iOS App Dev. course lectures
- Verified SDK release quality by preparing & manually executing detailed test plans using Xcode **Simulator**, **Instruments**, **Charles**, & exploratory testing
- Documented tasks with **JIRA**, and engaged in agile scrum meetings including daily stand-up, sprint planning, and retrospective

FULL STACK WEB DEVELOPER, Properly Inc.

Toronto, ON | May - Aug. 2019

- Implemented and tested back-end systems with **AWS Serverless** infrastructure (**Lambda**, **S3**, **DynamoDB**, **CloudFormation**)
- Developed front-end of active listing site with **JavaScript**, **CSS**, **React**, & **Redux**, and set up **Google Analytics** to track website behaviour
- Powered listing site with MLS data pulled using **RETS** framework in Python
- Reduced operations bottleneck by building end-to-end **Python** system and API to fetch data on problematic homes and display alert on operations portal

SOFTWARE DEVELOPER, BAML

Toronto, ON | Sept. - Dec. 2018

- Improved database security for front-office trading system by reimplementing report generator with custom options, result filtering, and Excel exportation
- Created endpoints for **Java** server and used **Postman** to test HTTP requests
- Formulated complex **SQL** parameterized queries and procedures to retrieve client data used to populate **WinForms** UI designed in **C#**, and **JasperReports**

PROJECTS -----

PERSONAL WEBSITE, jennyguan.codes

Sept. 2020

- Independently developed a **React** web app using **JavaScript**, **HTML**
- Designed a responsive and user-friendly interface using **CSS** and **Flexbox** layout

QUADRIS, UWaterloo CS246 Final Project

July 2018

- Developed a Tetris-like tile-matching game in a team of 3 in **C++**
- Handled block creation and levels with varying obstacles and block rarities
- Tested all commands and cases including block requests, queue, points, & reset

PREDICTIVE BOT, KPMG LLP.

Jan. - Apr. 2018

- Organized and facilitated Sky AI Team meeting to align vision and set task goals for a ML project to predict NBA game outcomes with a binary classifier
- Experimented with **Beautiful Soup** package in **Python** to web scrape historical game data into a database as input for algorithm
